Given an integer `num` , repeatedly add all its digits until the result has only one digit, and return it.

Example 1:

Input: `num = 38`

Output: `2`

Explanation: The process is
38 --> 3 + 8 --> 11
11 --> 1 + 1 --> 2
Since 2 has only one digit, return it.

Example 2:

Input: `num = 0`

Output: `0`

Constraints:

- $0 \leq num \leq 2^{31} - 1$

Follow up:

Could you do it without any loop/recursion in $O(1)$ runtime?

Accepted 452,160
